

NUM.

NUM × X • LAUNCH CAMPAIGN BRIEF

The Concierge Campaign

Num is an AI travel concierge with **2.69 million places** mapped across **104 destinations** in **38 countries**. We've spent the last month running paid creative tests, and we know which format works. This is what we'd bring to X.

2,686,795 PLACES MAPPED	104 DESTINATIONS	38 COUNTRIES	492,545 IMPRESSIONS
---	--	------------------------------------	---

SECTION ONE

What we bring to the table

A live product with real coverage, a creative library of **18 finished films**, a month of paid testing behind us, and a clear read on which creative format earns attention. Measurement is already installed and firing — pixels live across 78 pages, conversion events wired, one tracking tag per creative ready to go.

We're looking for X to be the channel where we point all of that at the right audience, in the market where our data is deepest.

Paid performance so far

We ran a month of paid distribution to learn what the creative could do. The efficiency numbers came back strong.

492,545 IMPRESSIONS	10,333 CLICKS	2.01% CLICK-THROUGH RATE	\$0.043 COST PER CLICK
-------------------------------	-------------------------	------------------------------------	----------------------------------

A **2.01% click-through rate at four cents a click** tells us the creative stops the scroll and the offer is legible in one line. Within the same account, our core product campaign delivered clicks at **4×** the efficiency of our secondary brand campaign — so we already know which message to put money behind.

The read in one line

The product is live and queryable today, the creative pipeline is running weekly, and the measurement layer is in place. What we're bringing to X is a campaign that can start the week it's approved — with a creative format we've already proven and a market where Num gives the fullest answer.

SECTION TWO

What the creative testing tells us

We published our films organically with no promotion behind any of them, which makes it a clean read on the creative itself: identical distribution, identical brand, identical voice. One format pulled away.

Relative performance index — organic views, no paid promotion on any asset, indexed to the strongest performer.

The finding we'd build the campaign on. A counted list with a real number in it outperforms a product claim by roughly **16x** — same footage, same voice, same brand. "Nine places and what each one costs" earns attention. "Your group chat can't pick a restaurant" does not.

People don't click a claim about a product. **They click a number they can check.** Every asset in the shortlist on the next page is built that way.

What that gives the first flight

OPEN ON A NUMBER

A price, a count or a date the viewer can verify inside the first three seconds.

COUNTED LISTS LEAD

The two strongest formats in testing are both counted lists, and both are cut and ready to run.

FACTS, NOT CLAIMS

We say what is true about a place rather than what is good about the app.

SECTION THREE

Where we're pointing it

Our coverage is global, and two things make **Los Angeles** the right launch market: it holds the richest media library of any destination in the index, and it's where our signed business partners already are.

Places mapped per destination. Los Angeles carries 90,264 places, 3,798 with live opening hours and the only photographic library in the index — so a visitor asking Num a question in LA gets the fullest answer we can give.

And a second market behind it. Our testing surfaced genuine appetite in Southeast Asia — Thailand produced the highest engagement rate of any geography we've run, and we hold **136,000 Thai listings** against it. That's the market we'd open once LA is proving out.

Why LA first

90,264

PLACES IN MARKET

3,798

WITH LIVE HOURS

1st

PHOTO LIBRARY IN INDEX

Depth of data is what makes the product feel finished on first use. LA is where a new user gets the best possible first answer — which is exactly where we want paid attention landing.

And whichever market we open next, the coverage is already behind it — 104 destinations live and queryable today, with the production pipeline adding a new destination film every week.

SECTION FOUR

The creative we'd bring

All vertical 1080×1920, H.264/AAC, mastered to broadcast loudness, ready to upload natively today. Long-form cuts available at 1920×1080.

LEAD CREATIVE

Tokyo: 9 Places Worth Your Time (And What Each One Costs)

2:40 • long-form + vertical cut • strongest performer in testing

The format the data backs: a counted list with a price against every entry. Opens on the Tokyo tuna auction — **\$3.2M for one fish** — the most arresting three seconds in our library, and a genuine fact rather than a claim.

SECOND

Top 5 Places This September (And a 6th We're Not Naming)

Short • 1080×1920 • second strongest in testing

Same counted structure, tighter runtime, with an open loop in the title that earns the last three seconds. Strong performance with nothing behind it.

THIRD

The Louvre Reopened the Room They Robbed

25.6s • 1080×1920 • new for this campaign

88 million euros of French crown jewels, eight of the nine pieces never recovered — and the room is open to walk into. **Fact-led, news-adjacent, and the strongest cold open we've produced.**

FOURTH

Half of Paris Guides Still Send You to a Building That's Shut

24.1s • 1080×1920 • new for this campaign

The Pompidou closed in 2025 and doesn't reopen until 2030. Corrective, specific, checkable — and evergreen for another four years.

SECTION FIVE

How we'd run it

1 Conversion events configured before launch

Event IDs created in Events Manager and verified firing on the live page before the first dollar goes out, so the campaign optimises toward a real outcome from day one.

2 United States, focused on Los Angeles

Pointed at the market with the deepest data and our signed partners on the ground.

3 Native video, every time

Uploaded directly to X so it autoplays in the timeline. Any link goes in the first reply, never the post.

4 One tracking tag per creative

So we can tell you exactly which asset is working within the first week, and put budget behind it.

5 Measured on cost per first ask

The moment someone actually asks Num a question is our real conversion, and it's the number we'd hold the campaign to.

Ready on day one

CREATIVE

18 finished films — 14 vertical, 4 long-form — all mastered and cleared

MEASUREMENT

Pixels live across 78 pages, conversion events wired and firing

COVERAGE

2.69M places, 104 destinations, live and queryable today

PRODUCTION

A working pipeline producing new destination films weekly

We've done the creative testing, we know which format earns attention, and the measurement layer is already in place. What we want from this campaign is **volume against the right audience** — and a clean read on cost per ask in a market where Num can give a complete answer.

Num is operated by Sarz Inc. · itsnum.com · Performance figures from paid distribution 13 Aug – 11 Sep 2026 and organic creative testing through 15 Sep 2026. Creative index reflects organic views with no paid promotion applied to any asset.
