The AI Travel Concierge — Phuket Partner Brief

What is live, how we earn, and how we scale • July 2026 • Confidential

itsnum.com • LINE @799pyrus • info@5arz.com

1 · What NUM is

NUM is a personal AI travel concierge that lives inside the chat apps travelers already use. A guest adds **@799pyrus on LINE** (WhatsApp and WeChat next), says hi in any of 9+ languages, and asks for anything — "best massage near me," "seafood dinner tonight," "boat to Phi Phi tomorrow." NUM answers in seconds, recommends only **real, verified local businesses**, and arranges the booking in the same conversation. No app to download, free for travelers, forever.

For Phuket's businesses, NUM is the opposite of the OTA model: **free to join, free to be recommended, and a 10% fee only when a completed booking actually happens** — roughly half of what OTAs take, with no subscription and nothing owed on cancellations or no-shows.

2 · What is LIVE today

- **AI concierge on LINE** — answers in the guest's language; knows Phuket (sights, beaches by vibe, food identity, typical prices, seasons, scams to avoid, arrival FAQ); trained on world-class concierge doctrine: never a flat "no," anticipate the next need, empathy-first when something goes wrong.
- **A brain per guest** — NUM remembers each guest (area, dates, party, diet, budget, interests, open requests) and gets more useful every day. Privacy engineered in: chats sealed from staff, FORGET command erases everything instantly, profiles auto-erase after 12 months, every access audit-logged. PDPA-aligned by design.
- **Verified directory of 3,700+ Phuket businesses** with Google ratings — the AI recommends only from it, and paid promotion can never change organic ranking. Trust is the product.
- **Ground-truth engine** — guests earn stars for reporting wrong info (REPORT), the field team verifies on-site with photos, HQ approves, the map updates. Google is often wrong; NUM self-heals.
- **Referral engine** — tuk-tuk drivers, guides, and hotel staff carry personal QR cards; every traveler they bring earns them stars. Anyone can self-serve a card at itsnum.com/referral in 30 seconds. Every physical placement (billboard, wrap, sticker) gets its own code — marketing ROI is measurable per placement.
- **Phone-first business onboarding** — itsnum.com/claim works entirely from a phone, in Thai, or by typing CLAIM on LINE. Website, dashboards, and forms carry a 16-language translate widget; the operator console has a native EN-Thai toggle.
- **Boats, water sports & transport as a flagship vertical** — jet-ski, parasail, charters, transfers and tuk-tuks understood in 6 languages; bookings collect pickup point and departure time; jet-ski renters are told to film the machine first; fare ranges quoted so guests can't be overcharged.
- **Affiliate product engine** — when a guest asks for sunscreen, water, flip-flops, beer, swimwear, or SIM cards, NUM points to a nearby partner shop and attaches a NUM promo code. Partners count code uses; we invoice the kickback. Live now; first 10 shop deals to be signed by the ground team.
- **Operator console** — live dashboards for operations, executives, sales, directory, HQ, field team, and AI quality: 36 screens, charts, the island map of signed vs unsigned businesses, and a per-business master record with edit history.

3 · What NUM does for Phuket

Who	What they get
Travelers	A free concierge in their pocket, in their language, that never sleeps — plus scam

	protection, safety guidance, honest prices, and bookings without language barriers.
Local businesses	High-intent guests at the exact moment of decision; bookings on their phone; pay only on results (10%); demand analytics; a claimable profile instead of an OTA toll booth.
Drivers & locals	A second income: stars for every traveler referred, redeemable at partner businesses. The island's working people become NUM's sales force.
The island	Accurate, living business data; visitors spread beyond the same five hotspots to deserving small businesses; a quality bar (verification) that rewards honest operators.

4 · How we make money

1. Booking success fee (the backbone): 10% of completed bookings only. Premium 15–20% tier for the whale segment (yacht charters, villas, private tours) where tickets run 15,000–80,000฿+.

2. Stars — businesses buy visibility (the growth engine): businesses purchase star packs (1★ = 1฿; 1,000–50,000฿ packs with volume bonuses) and spend them on clearly-labeled promotion products:

Product	What the guest sees	Draft price
🌟 Featured line	One labeled suggestion added when guests ask for that category + area	900★ / week
🎉 Event promotion	Surfaced when guests ask "what's on tonight / this weekend"	500★ / event-week
🔥 Promo of the day	The business's deal shown on matching asks	300★ / day
🚀 New-listing boost	Two weeks Featured after claiming (claim-flow upsell)	1,500★ one-time
🛟 Rescue priority	First ping among equals on unmet-request rescues	200★ / month

Trust rule: paid placement never changes organic ranking, and every paid line is labeled. Guests trust NUM because recommendations cannot be bought — businesses pay for visibility around that trust, never instead of it.

3. Affiliate products: promo-code kickbacks on the things every tourist buys (sunscreen, beer, swimwear, SIMs). Codes counted at the till, invoiced monthly — no systems integration needed.

4. Later: merchant analytics subscription (~990฿/mo), booking-calendar SaaS for businesses that adopt NUM as their booking system, tourism-board partnerships.

The flywheel: businesses buy stars → guests see labeled promos and book → 10% fees + guests earn stars → guests redeem stars at partners → partners get traffic and ad-credit back → they promote more. Drivers feed new guests in at the top. Every loop passes through NUM.

Regulatory design (important): guests and drivers only EARN stars — never buy them. Purchased stars are business ad-credit spendable only on NUM services. This keeps stars outside Thailand's e-money licensing (100M฿ capital requirement) as a closed-loop program. No cash-out, no user-to-user transfers, ever.

5 · Go-to-market

First 100 businesses in 30 days: two field pairs (closer + verifier/photographer) at 3–4 onboardings/day; week targets 15 → 25 → 30 → 30. Start with the 20 best-rated businesses so their names sell everyone else. Category quotas keep the AI stocked: ≥30 restaurants, ≥15 spa/massage, ≥15 boats & water sports, ≥10 tours, ≥5 transport. The 25-minute script ends with a live test booking and a window QR sticker.

The channels: 153 businesses already emailed (replies flowing to info@5arz.com) · 501 phone-only businesses on the call list · Patong (784 mapped) and Kata (581) walk territories · the /claim funnel and LINE CLAIM keyword · driver referral cards (10 printed, self-serve for unlimited more).

On-ground marketing — one CTA everywhere: the QR + LINE @799pyrus + "Your free AI travel guide · ไกด์ AI ฟรี". Placement #1: the airport arrivals→taxi corridor billboard (highest-intent moment on the island). Then tuk-tuk wraps (drivers already earn our stars — a wrap bonus makes them rolling billboards), beach-entrance QR signs that double as red-flag safety info, window stickers on every onboarded business, front-desk cards at guesthouses without concierges, and "NUM-verified ✓" flags on partner boats. Every placement carries its own tracking code — nothing gets printed without one, so every baht of marketing is attributable.

Boats first: highest tickets, highest commission, and the booking guests most fear making blind. Verification is the pitch: field team sights insurance and TAT licence, records pier and capacities. Signature "only on NUM" experiences to recruit: bioluminescent night kayaks, sunset longtails, private chefs on charters, sunrise Phang Nga before the crowds.

6 · How we scale

- **Phase 1 (months 1–2):** Phuket 100 verified, free everything, 300+ bookings/month flowing. Revenue = fees only. Prove the loop.
- **Phase 2 (months 2–4):** Phuket 500. Star sales switch on as a warm upsell to businesses already receiving bookings ("you got 3 bookings this month — want to be Featured?"). Whale tier live.
- **Phase 3 (months 4–8):** second market (Samui or Krabi) — the entire stack is location-neutral by design; a new market costs one field team + one data-ingestion run.
- **Phase 4:** Bangkok & Chiang Mai, WhatsApp + WeChat channels mature, booking SaaS, tourism-board partnerships.

What stays central vs local: 5arz holds the platform, AI, brand, and playbooks; the Thai JV holds merchant contracts, revenue collection, staff, and compliance. Numbers we watch: bookings per merchant per month, take per booking, star ARPU, field cost per verified merchant, referral cost per user, merchant churn, affiliate revenue per 1,000 conversations.

7 · What we need from the Phuket team

- Your walk territories and team roster for the first-100 sprint — and your read on the promo-menu pricing.
- The JV shareholder plan (we propose a Thai Co., Ltd.; three ownership routes prepared — including the US–Thai Treaty of Amity if the cap table qualifies) and a bank able to onboard Omise/2C2P with PromptPay.
- Your boat-operator list for the flagship vertical, and 10 launch affiliate shops (2 pharmacies, minimart, beachwear, SIM counter, sports shop).

- A local print vendor (cards, stickers, boat flags) and billboard/wrap placement options with costs — every placement gets a tracking code.
- The dedicated WhatsApp SIM (claim line) — the one open channel item.
