

NuM

PERSONAL CONCIERGE · LUMI

A partnership for

the 18 million.

NuM × Phuket AI — Partnership Proposal

Why now

The window is short. The infrastructure decision gets made once.

18M

projected 2025 visitors to Phuket (+20% YoY)

Tourism Authority of Thailand

4.2M

from China — the top international market

WhatsApp is not their channel

200K+

tourism professionals in your ecosystem

every one is a potential merchant

The AI travel layer for Phuket gets locked in over the next 12 months. Your consumer brand is in market. Our engine is built. The fastest way to own this category is to stop building parallel stacks and start running on the same one.

W h a t N u M i s

A personal concierge. One AI per person. It remembers.

Every NuM user gets their own AI agent tied to a UUID, with an encrypted profile that learns and adapts over time.

Day 1: "I'm vegetarian, traveling with a 7-year-old."

Day 4: "Find us dinner tonight." — NuM proposes a kid-friendly veg-friendly spot without re-asking.

Month 3: User returns for a school visit. NuM remembers the kid's age and the previous shortlist.

That continuity is the product. Everything else — bookings, leads, vendor routing — is downstream.

Multi-channel brain

WhatsApp · LINE · WeChat · SMS · QR — one user, one memory, every channel.

Encrypted profile

Field-level KMS envelope encryption on PII, passports, payment tokens. PDPA + GDPR ready.

Whale-lead router

Real estate, schools, relocation, visa, medical — separate qualification flow, human handoff.

Multi-tenant by design

Every row scoped by partner_tenant_id. Tenants never see each other's data.

Where the maps overlap

You own the front door. We've built the rooms behind it.

PHUKET AI

Brand, distribution, ground truth

- Consumer brand already in market
- WhatsApp Business presence + QR distribution
- Trusted local merchant network (hotels, tours, yachts, SPA, F&B)
- 8 verticals already taxonomized
- Front-of-funnel marketing in tourist channels

NUM

Memory, depth, monetization rails

- Persistent per-user memory (vector + tagged)
- WeChat + LINE adapters for non-WhatsApp markets
- Encrypted PII vault — passports, payments, school docs
- Whale-lead routing (property, schools, relocation, visa)
- Multi-tenant SaaS backbone with KMS isolation

Recommended shape

Phuket AI, powered by NuM.

Your brand. Your distribution. Your merchants. NuM is the engine underneath.

01

Tenant of record

Phuket AI is provisioned as the Phuket regional tenant on the NuM platform. Your data, your KMS keys, your dashboard. Co-brand at launch — "Phuket AI, powered by NuM" — full white-label available at Enterprise tier.

02

Channels you don't have yet

We light up WeChat (for the 4.2M Chinese visitors who don't use WhatsApp) and LINE (for the Japanese, Korean, Thai mainland flow). One profile, every channel, same memory.

03

The high-LTV layer

Whale-lead routing for property buyers, school enrollment families, long-stay relocators. These are 70/30 in your favor — you close the deal, you bring the relationship, NuM does the qualification.

Who brings what

Crisp boundaries. No overlap. No turf.

Workstream	Phuket AI	NUM (Lumi)
Consumer brand · marketing	Lead	Co-brand only
Merchant relationships · onboarding	Lead — bring your network	Schema + admin tool
WhatsApp channel	Existing setup + number	Adapter into NuM gateway
WeChat · LINE channels	Local language QA	Build + maintain adapters
AI brain · memory · prompts	Voice / tone input	Lead
Encrypted profile + PDPA compliance	Local counsel review	Lead — KMS, audit, scrubber
Whale leads (RE, schools, relocation)	Close the deal · own the relationship	Qualify, route, score
Analytics dashboard	Use it · feed back	Build + host
Customer escalations	Human responder during hours	Auto-escalation logic + SLA

Shape of the deal

Aligned during the pilot. Generous through the partnership.

PILOT — MONTH 1

Platform fee	Waived — NuM absorbs ~[TBD: \$2–3k] infra during pilot
Booking commissions split	50 / 50 · NuM / Phuket AI
Whale-lead split	30 / 70 · NuM / Phuket AI (you close the deal)
Merchant featured-listing	40 / 60 · NuM / Phuket AI (your network)
Data ownership	User data stays with the user. You get aggregated, anonymized analytics.

PRO — MONTH 2 ONWARDS (if pilot KPIs hit)

Setup fee	[TBD: \$5,000] one-time at signing
Platform fee	[TBD: \$2,500/mo] base + \$0.04 per conversation above 5,000/mo
Booking commissions split	35 / 65 · NuM / Phuket AI
Whale-lead split	25 / 75 · NuM / Phuket AI
Territory + exclusivity	Phuket island, optional exclusivity add-on (+30%) at Pro tier

Start small. Prove fast. Compound.

9 0 D A Y S

China wedge + pilot proof

- WeChat Service Account live — Phuket AI now reaches the 4.2M Chinese visitors WhatsApp can't.
- NuM persistent memory live behind your WhatsApp number — users stop repeating themselves.
- Whale-lead routing on for Property + International Schools verticals.
- Joint KPI dashboard. Weekly review.

1 8 0 D A Y S

Full multi-channel + premium tier

- LINE channel live (JP/KR/TH mainland).
- Phuket AI Premium tier launched — concierge SLA, no featured-listing bias, family-share.
- 60+ merchants onboarded into the NuM vendor schema.
- First real-estate close attributed to the partnership.

3 6 5 D A Y S

Territory lock + adjacent markets

- Pro → Enterprise tier; territory exclusivity earned via MAU thresholds.
- Anonymized aggregate intelligence report — sellable to TAT, hotel groups, DMOs.
- Joint expansion plan: Bali, Bangkok, Koh Samui under the same engine.
- Renegotiate splits with proven traction.

R i s k s , c a l l e d e a r l y

Every risk we see. How we handle each.

Brand confusion	We co-brand at launch ("Phuket AI, powered by NuM") and run a 30-day messaging review with your team before any user-visible change. Phuket AI stays the consumer brand. Always.
Migration risk on your existing stack	We do not rip-and-replace. Phase 1 is an extension behind your existing WhatsApp number — your users see no change until persistent memory kicks in and recommendations get sharper.
Content quality on day one	The AI is only as good as the merchant data. We invest the first 10 days of the pilot on real vendor content — current hours, real photos, honest segment notes. Funnel without product = chatbot. We don't ship that.
PDPA / data residency	Supabase ap-southeast-1 (Singapore). Field-level KMS encryption on PII. WeChat traffic logically separated. Local counsel review on every consent string.
Whale-lead handoff quality	Auto-escalation to a named human on your side with same-day SLA. Lead scoring (A/B/C) so your team isn't drowning in low-quality requests. Status tracking back into the AI so users don't get re-asked.

Three specific asks

What we need from you to move this in the next two weeks.

01

A 45-minute scoping call with your tech lead

We want to understand what's running under the hood today — your LLM, your WhatsApp setup, where state lives. We share our architecture in detail. Honest constraints, no NDAs at this stage.

02

Mutual NDA + a named partnership lead on each side

We'll send a clean two-page NDA. From our side: Dre. From yours: [TBD: name + role]. One thread, one decision-maker, no committee.

03

30-day China-wedge pilot scope

Cheapest, fastest test of the partnership: WeChat Service Account live behind your brand, NuM memory layer on. If it converts Chinese traffic that WhatsApp can't reach, we have our answer.

C l o s i n g

You bring the front door.

We bring the memory.

Phuket gets the AI it deserves.

F R O M N U M / L U M I

F R O M P H U K E T A I

[TBD: partnership lead]

[TBD: role · email]

Two structures we considered. Here's why we didn't lead with them.

ALT A

Joint premium-vertical attack only

Pros: Lowest integration risk. Clean handoff line — general queries stay on Phuket AI's bot; relocation / property / school escalate to NuM Concierge.

Cons: Smaller initial volume. Two AIs in one user journey = operational complexity. Doesn't solve the WhatsApp-only / China-market gap.

Why not lead with it: Good fallback. Worth piloting as part of the bigger shape, not as the headline.

ALT B

China wedge first, broader integration later

Pros: Fastest test (4–6 weeks once Service Account is sorted). Limited scope = limited risk. Solves a concrete gap (4.2M Chinese visitors / no WhatsApp).

Cons: Smaller share for NuM if it's the only thing we do. Leaves the persistent-memory upside on the table.

Why not lead with it: We folded this into the 90-day phase of the recommended shape — it's the proof point, not the whole partnership.

How Phuket AI plugs into the NuM engine.
